DETAILED ACTION

1. Claims 1-8 are pending.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-8 rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

With regard to claims 1 and 8, both merely recite a mathematical algorithm since they are drawn to calculating an RSA inverse value. As recited in the MPEP, Chapter 2106, Section IV, Part C, "Determining whether the claim falls within one of the four enumerated categories of patentable subject matter recited in 35 U.S.C. 101 (i.e., process, machine, manufacture, or composition of matter) does not end analysis because **claims directed to nothing more than abstract ideas (such as mathematical algorithms), natural phenomena, and laws of nature are not eligible for patent protection** (emphasis added)."

In addition, the resulting RSA inverse value has neither a recited practical application that produces a useful or tangible result as stated in the MPEP, Chapter 2106, Section IV, Part C, section 2, (2), a and b. "In addition, when the examiner has reason to believe that the claim is not for a practical application that produces a useful result, the claim should be rejected, thus requiring the applicant to distinguish the claim from the three 35 U.S.C. 101 judicial exceptions to patentable subject matter by **specifically reciting in the claim the practical application** (emphasis added)." And, "However, the tangible requirement does require that the claim must

recite more than a 35 U.S.C. 101 judicial exception, in that the process claim must set forth a practical application of that judicial exception to produce a real-world result.”

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Catalano et al., *Computing Inverses over a shared secret modulus*, discloses solving the RSA inverse problem.
